EDUCATION

Master of Science in Software Engineering

Jul 2027

San Jose State University, San Jose, CA

- Relevant course work: Enterprise Application Development, Enterprise Software Platforms, Embedded Software

Bachelor of Science, Computer Science

May 2025

California State University, East Bay, Hayward, CA

- Relevant course work: Artificial Intelligence, Natural Language Processing, Operating Systems, Website Development
- GPA: 3.89/4.00

TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript, Go, Bash, SQL, Swift, HTML/CSS, TypeScript

Frameworks: Node.js, Flask, Spring Boot, React, Django, crewAI, LangChain, JUCE, FastAPI

Developer Tools: Git, GitHub, Docker, Kubernetes, Google Cloud Platform, CMake, Amazon Web Services, PostgreSQL, MongoDB, MySQL, Pinecone, gRPC, FreeRTOS

Libraries: pandas, NumPy, Tensorflow, PyTorch, Scikit-learn, SwiftUI

PROJECT EXPERIENCE

Lumen – AI-Powered Skincare Assistant | Swift, SwiftUI, AWS Lambda, Python, Bedrock, OpenAI GPT-4o, Pinecone

Oct 2025 - Nov 2025

- Developed an iOS application leveraging machine learning and GPT-4o agents to analyze skin conditions from user photos, delivering personalized insights and skincare routines.
- Boosted skin metric processing efficiency by integrating dual-model validation pipelines, improving analysis accuracy and reliability..
- Engineered a hybrid multi-agent architecture using AWS Lambda, Cognito, Pinecone (RAG), and OpenAI/Bedrock, reducing latency by 50% and enabling real-time user feedback.
- Implemented secure, local-first data management with SwiftData and Cognito-authenticated AWS API Gateway endpoints, enhancing privacy and compliance.

Distributed Overlay Network System | Python, gRPC

Nov 2025

- Engineered a distributed network system enabling automatic data partitioning and high-concurrency query processing using Python and gRPC.
- Improved benchmark throughput by 45% through weighted and hybrid fairness algorithms, ensuring balanced load distribution across multi-host configurations.
- Automated chunked data aggregation and client query handling, streamlining result retrieval and minimizing latency for large data slices.

BotanicaSynth | C++20, JUCE, CMake

Nov 2025

- Developed a MIDI-triggered granular sampler plugin and standalone synthesizer using JUCE, enabling musicians to load and manipulate audio samples via granular synthesis—achieved real-time processing of up to 128 concurrent grains for dense sound textures.
- Designed an interactive UI with waveform visualization and draggable loop region controls, reducing sample editing time for users by more than 54% and improving accuracy in start/end region selection.
- Streamlined audio sample workflow by implementing drag-and-drop support for 5 audio formats (WAV, MP3, AIFF, FLAC, OGG), decreasing sample-loading steps by 43-56% compared to manual file browsers.

EXPERIENCE

Production Operator, Supermicro, San Jose, CA

May 2022 - July 2026

- Resolve server performance issues by fixing system components, leading to a 15% increase in efficiency for production testing.
- Setup JSON configuration files for multiple bash scripts to update NIC, NVMe, AOC FW for servers as well as for setting up RAID configurations from RAID1 to RAID5, speeding up production time in testing by 76%.
- Diminish server downtime by 30% through proactive troubleshooting and repairs based on specified guidelines.
- Install and configure all types of OS environments including Windows and Linux distributions for a variety of servers.
